

Bracket Support for the DDF 1000C

Side View

Note:

A) The post is 6'8" long. Each machine will have to be measured to make sure the post is the correct height. Need to know the distance from the floor to the top of the oil reservoir (I think most machines have the same height). Also, need to know the distance we can go down before we hit oil (i.e. how far from the top of the oil reservoir to the oil level).
